

INSTALLATION INSTRUCTIONS & MANUAL FOR MAINTENANCE

TOPSHAM SMALL 3 CF/LF

Gas fire with closed combustion system

Bellfires wishes you many cosy evenings with your new Bellfires gas fire

This document is an essential part of your gas fire. Read it carefully before installation and maintenance of the gas fire and keep it in a safe place!

Serial number:

Production date:

BELLFIRES GAS FIRE WITH CLOSED COMBUSTION SYSTEM:

Topsham Small 3 CF (Centre Fire) (TSS3 CF)

Topsham Small 3 LF (Line Fire) (TSS3 LF)

IMPORTANT

**The installation must only be carried out by a
“Gas Safe Register” registered installation engineer.**

1 INSTALLATION INSTRUCTIONS

1.1 GENERAL

The gas fire must be positioned and connected as a “room sealed system” (balance flue) appliance by a “Gas Safe Register” registered gas installation engineer in accordance with the following installation instructions, nationally and locally applicable regulations (see “Technical Details/ Regulations” at the rear of this manual). If you have any queries regarding the installation, please consult your local gas company.

Important:  **Before beginning the installation, check that the details on the rating plate correspond to the gas type and pressure to which the appliance will be connected.**

The appliance is supplied with a “Centre Fire” or “Line Fire” double burner, as ordered. These burners each have their own specific flame image which is defined by the perforation pattern in the burner cover. See Chapter 5 and the Instructions for use.

The appliance is factory set to the correct nominal heat input. The pilot light is set to the correct level of consumption.

Depending on the requested version, the appliance will be delivered from the factory with a Ø100 mm - Ø150 mm or Ø130 mm - Ø200 mm concentric connection for extracting the flue gases and supply of combustion air.

It is possible to install the gas fire with either a wall or roof outlet.

The roof connection must be carried out using the concentric flue system Ø100 mm - Ø150 mm. The fumes are exhausted naturally to the outside environment through the inner Ø100 mm pipe whereas the combustion air supply passes between the Ø100 mm and Ø150 mm pipes.

The wall connection must be carried out using the concentric flue system Ø130 mm - Ø200 mm. The flue gases are evacuated outside by means of natural draft through the internal pipe of Ø130 mm, whereas the combustion air is supplied between the pipes of Ø130 mm and Ø200 mm. The wall outlet itself is, depending on the concentric flue gas system configuration, Ø100 mm - Ø150 mm or Ø130 mm - Ø200 mm. (In some cases, with a wall connection, a complete concentric flue system Ø100 mm - Ø150 mm is also possible (see Chapter 1.6.1).)

The gas fire can be installed in a completely sealed or mechanically ventilated house without extra ventilation and/or fume extraction.

The gas fire is installed as a **built-in** appliance in a fireplace.

In order to prevent the fireplace heating up excessively, it must be properly ventilated by installing vents at the top and bottom of the fireplace.

The appliance can be fitted with a convection package as an optional extra. This is a convection top plate for on top of the appliance, two flexible aluminium pipes and two built-in convection vents. This enables hot air to be circulated into the room.

If an existing chimney is to be used, please consult your installer first. If the chimney was previously used for a wood or coal fire, then it should be cleaned by an expert.

1.2 CONCENTRIC FLUE SYSTEMS Ø100 MM - Ø150 MM AND Ø130 MM - Ø200 MM :

- **Bellfires** (Muelink & Grol system)
- **Poujoulat** (PGI system)
- **Ontop** (Metaloterm US system)

The gas fire, in combination with the concentric flue system [Ø100 mm - Ø150 mm] and/or [Ø130 mm - Ø200 mm] (rigid and/or flexible) for the brands Bellfires (Muelink & Grol system), Poujoulat (PGI system) or Ontop (Metaloterm US system), has been approved in accordance with the European CE-norm for gas appliances and may therefore be used only with these systems. The permitted components for these systems are listed in Chapter 1.6.2. The guarantee on the appliance lapses if it is installed, fully or partially, with other components or a different flue system.

The concentric flue [Ø100 mm - Ø150 mm] and [Ø130 mm - Ø200 mm] systems can be used with either a newly-built or existing chimney.

1.3 INCLUDED

Set documentation	<ul style="list-style-type: none"> - Instructions for use - Installation instructions
Attributes	<ul style="list-style-type: none"> - Ceramic log set, or marble pebbles white or marble pebbles grey - Hook (for opening the frame and the glass)

N.B. If any part is missing, please contact your dealer.

1.4 OPTIONS AND ACCESSORIES

The following options and accessories can be supplied by your dealer:

<u>Part no</u>	<u>Option</u>
331229 331087 312829	<u>Convection package Topsham Small 3</u> <ul style="list-style-type: none"> • 1x Convection casing • 1x Top plate Convection • 1x Convection set General

329874	Set carrying brackets (2 pieces)
3.....	Bellfires (M&G) concentric flue system See component summary
3.....	Poujoulat (PGI) concentric flue system See component summary
3.....	Ontop (Metaloterm US) concentric flue system See component summary

1.5 PREPARATION FOR INSTALLATION

The following preparation must be carried out before the gas fire can be installed.

1.5.1 Instructions for positioning the outlet

1.5.1.1 Positioning the outlet for correct operation:

Roof-mounted outlet:

Figure 1: Roof-mounted outlet

This must be positioned at least 0.5 m from the roof edge; the apex of the roof can be disregarded.

Wall-mounted outlet:

Figure 2: Wall-mounted outlet

This must be positioned at least 0.5 m from:

- the corner of the building.
- the roof overhang, the rain gutter.
- balconies etc., unless the exhaust construction extends to at least the face of the protruding section.

1.5.1.2. Positioning the outlet to avoid affecting the surrounding area

All listed “distances” in this section are no more than guidelines.

For the exact minimum “distances”, please consult your national and local directives.

“Distance” = minimum distance required for positioning of the outlet to avoid adverse effects with respect to:

- A. A ventilation opening serving an occupied room, a toilet or a bathroom.
- B. A heating air supply, when the supply flows through an occupied room.
- C. A window that can be opened and that is near an occupied room, a toilet or a bathroom.

Roof-mounted outlet:

<u>To avoid adverse effects</u>	<u>Distance: outlet - A, B or C</u>
At the same roof level.	>3 m (*)
At a different roof level.	>1 m (*)
At a lower positioned wall.	>1 m
At a higher sloping surface.	>3 m (**)

(*) If the required distance cannot be achieved, the outlet position rules take precedence.

(**) If the required distance cannot be achieved, the position of the outlet must be at least 1 m above the highest facade/roof.

Wall-mounted outlet:

<u>To avoid adverse effects</u>	<u>Distance: outlet - A, B or C</u>
At walls in buildings with staggered heights.	Not permitted if A, B, or C are located above the outlet.
On a wall - general. (*)	Above the outlet: >2 m Below the outlet: >0.75 m Left and right of the outlet: >0.75 m
At <1 m from the roof overhang.	>2 m
Beneath balconies, walkways etc.	>2 m from the underside of the protruding balcony or walkway.
Beneath balconies, walkways etc. where the outlet extends to the front.	>2 m
To the garden or on the terrace.	>2 m to the outside space. (**)
With respect to a facing wall.	>2 m (if the distance from the facing wall is less, the criteria detailed for "On a wall - general" apply).
Enquire at your local gas company for the regulations relating to outlets positioned opposite each other and outlet(s) in facade(s) that form an angle.	

(*) These minimum distances do not apply if there is an obstruction between the outlet and A, B and C that protrudes at least 0.5 m from the wall and has a length exceeding the distance.

(**) This distance is not required if the outlet is situated at least 1 m higher than the intended area of the outside space.

If the outlet has a clearance of less than 0.5 m from the hard surface of a public area at a height of less than 2 m, it must be fitted with an effective protector. The mesh size of the guard must not affect the correct operation of the appliance.

1.6 GENERAL SERVICES

1.6.1 The Fume Channel/Combustion Air Intake

The combined fume channel and combustion air intake requires one of the following concentric flue system configurations.

Important:

Due to the high temperature of the outer walls (approx. 150°C), no flammable materials may be located or used in the vicinity of the flue system. The complete flue system, must therefore be sleeved with a heat resistant material after assembly.

Ventilate the covered concentric flue by fitting a grid near the floor and ceiling (on each floor).

Do not insulate the concentric flue.

Use the universal wall/floor support Ø150 mm to attach the covering of the concentric flue system [Ø100 mm - Ø150 mm], see 1.6.2, drawing number 36.

- The room-sealed gas appliances have been approved in combination with the components of the concentric flue systems listed in this instruction book, according to the European CE norm for gas appliances and may therefore be used **only** with these components.
- The components of the concentric flue system of Bellfires (M&G system), Poujoulat (PGI system) and Ontop (Metaloterm US system) may **not** be used together in one installation.
- Check whether the wall or roof termination kit to be used **exactly** matches one of those listed in this instruction book.

1.6.3 Gas connection

Operation (gas regulating block (and receiver)) **outside** the appliance (in the operating unit):

The gas connection is situated where the operating unit is built in near to the appliance.

Use only gas piping with a minimum diameter of 1/2" and a shut-off valve.

1.6.4 Operating unit

If the appliance is fitted with an operating unit comprising gas control block and receiver, this will be located, once it has been built in, at a **maximum of 50 cm** from the left or right hand side of the appliance.

1.6.5 Convection package connections

When fitting a convection package (= convection casing and convection set (1x)), consideration should be given to the openings at approximately 1 meter above the appliance for the warm air exiting grids.

1.7 POSITIONING THE APPLIANCE

Important:

- The fireplace is constructed on a sufficiently solid floor that can bear the weight of the appliance.
- Ensure a free space of at least 6 cm between the bottom of the appliance and the floor.
- Ensure that the temperature of the floor under and in front of the appliance can never rise above 85°C!
Make use of a temperature protection plate (of nonflammable material) on the floor if necessary.
Take care with a floor made of a flammable material.

Figure 15: A clearance of at least 6 cm must be maintained between the bottom of the appliance and the floor.

Never position the appliance directly against the rear wall, but always place a nonflammable insulation plate, at least 12 mm thick, between the appliance and the rear wall, with free space on either side of 2 cm. (Total \pm 5 cm.)
The rear wall must be made of nonflammable material.

Never use combustible materials during the installation.

Ventilate the fireplace, by allowing vents above and below the fireplace.

During installation of the gas fire, a clearance of 3 mm should be maintained on all sides of the appliance to allow for expansion of the appliance during operation.

Do not insulate the appliance! Only the top and sides may be fitted with a strip of white, loose insulation wool (heat-resistant to 1000°C), width 15 cm max. to protect the wall.

Do not use fibreglass or Rockwool, or any other sort of insulating material. These emit a pungent odour. This is considered extremely unpleasant. They may also cause discolouring of the column.

Flammable materials, such as curtains, should not be placed in the vicinity of the gas fire.
Minimum safe distance: 100 cm.

If desired, fit a convection package to the appliance.
(See chapter 1.1)

The appliance can be easily installed using a set of carrying brackets (accessory).
After installing: remove carrying brackets!

Figure 16: Appliance installed in ventilated chimney breast
Horizontal outlet of the flue gas exhaust / combustion air supply via the wall.

Fitted with the options / accessories:

- convection package (= convection casing and 1x convection set)
- high adjustable feet

- 1 Inlet opening (appliance) convection air
- 2 Inlet opening (grate) (chimney breast) convection air
- 3 Natural convection in the chimney breast
- 4 Outlet opening (grate) (chimney breast) natural convection air
- 5 Outlet opening (appliance) convection air / connection convection set (2x)
- 6 Outlet opening (grill convection set) (chimney breast) convection air (2x)
- 7 -
- 8 Concentric flue connection appliance; Ø130-200 mm for a horizontal wall outlet
- 9 Horizontal wall outlet
- 10 Built in operating unit with gas regulating block and receiver

Figure 17: Appliance installed in ventilated chimney breast
Vertical outlet of the flue gas exhaust / combustion air
supply via the roof.
Fitted without convection package

- 1 Inlet opening (appliance) convection air
- 2 Inlet opening (grate) (chimney breast) convection air
- 3 Natural convection in the chimney breast
- 4 Outlet opening (grate) (chimney breast) convection air (2x)
- 5 Concentric flue connection appliance; Ø100-150 mm for a vertical roof outlet
- 6 Concentric flue system; Ø100-150 mm for a vertical roof outlet
- 7 Built in operating unit with gas regulating block and receiver

When fitting the appliance, it can be levelled with the adjustable feet.

These adjustable feet can be reached via the openings (4x), after removing the protective covers, in the corners of the floor of the combustion chamber.

The floor of the combustion chamber can be reached after the window and the grill around the burner have been removed (see chapter 4).

Using an Allenkey (no. 5), the appliance can be adjusted to the required height.

Press the 4 protecting covers back into the floor.

- Position 4 protecting covers.

- Protecting cover.

- Adjustable feet seen from the bottom of the appliance.

- Adjust height with Allenkey no. 5.

Position the gas supply pipe such that it can be easily mounted after installation.

Because the control system is outside the appliance, the gas pipe must lead to where the operating unit (built in), the gas regulating block (and the receiver) assembly are fitted.

Move the appliance until it is ± 5 cm from the rear wall and ensure it is level. Place the nonflammable insulation plate (min. 12 mm) between the appliance and rear wall. The appliance may not be installed against a flammable rear wall.

Attach the appliance to the rear wall with 2 wedge bolts. Use the adjustable mounting brackets at the side of the appliance for this.

- 2x Mounting bracket.

1.7.1 Gas connection operating unit

Important:

During gas connection, take care not to twist the gas regulator block. Make sure that both the gas regulator block and the supply pipes are not subjected to stresses.

The appliance is supplied with a built-in operating unit.

Figure 18: Operating unit

Remove the decorative edging and door of the operating unit.

Fit the separate operating unit, where the gas regulator block and receiver will be placed, on max. 50 cm from the appliance.

The burner, gas regulator block and receiver have been fully factory assembled.

Disconnect the bracket with the gas regulator block and receiver from the appliance. Carefully move the bracket with the gas regulator block, receiver, pipes and cables to the operating unit. Mount the bracket at the bottom of the operating unit..

Important:

Take care that no pipes get damaged and no compression fittings come loose when moving the gas regulator block. Prevent twisting the flexible pipes! Check all compression fittings for leaks afterwards!

Mount the receiver in the top of the operating unit. Check afterwards that all electric connections are properly connected.

General:

Route all piping and cables from the operating unit to the appliance through an easily accessible hollow cavity.

During subsequent installation of the operating unit, protect the gas regulator block and piping against encasement by cement etc.

Important : Cement and chalk can damage the piping and can, in turn, lead to gas leaks.

Disassembly and assembly of pipes and cables:

If necessary for mounting, all pipe compression fittings and cable connectors can be temporarily disassembled. After mounting, carefully reassemble all pipes and cables. Check afterwards all compression fittings for leaks and that all electric connections are properly connected.

Important : Screw the thermocouple connection (and thermocouple interrupter) manually into the gas regulator block. Afterwards, carefully fasten a half turn with a spanner.

Note : Check that the flexible burner pipes are correctly connected! The gas connection of the gas valve “rear burner” must be connected to the “rear burner”! See Chapter 5. Switching over the flexible burner pipes during assembly can lead to an explosive ignition. Prevent this at all costs!

Figure 19: Gas regulator block and gas valve: Gas and thermocouple connections

Figure 20: Gas regulator block - Front

Figure 21: Gas regulator block - Rear

Figure 22: Receiver - Top

Figure 23: Receiver - AUX connection - RESET button

1.7.2 Connecting the concentric flue

Assemble the concentric flue system according to one of the examples in section 1.6.1, figure 4 to 14 inclusive.

Make sure that all connections are completely gas tight.

1.7.3 Building in the appliance

Remove the front of the casing, if applicable. (See Chapter 4: Dismantling / Assembling of the glass.)

Decide on positions of the vents (grilles above and below the fireplace) and, if applicable, the hot air grids of the convection package.

The brickwork must be built up around the hearth. In connection with the hearth expanding during burning: there must be at least 3 mm clearance on either side of the appliance. Do not build up the brickwork farther than the angle irons/brackets (keep in mind the thickness of any plastering!).

Do not use masking tape on the appliance when installing and plastering.

Tape can damage the finish of the hearth.

Connect up the convection package, if applicable.

The optional mantle iron is intended for supporting the brickwork above the hearth. The mantle iron must rest on the brickwork on both sides so that upward building is possible. The brickwork therefore must not rest on the fireplace; there must be approx. 3 mm clearance in connection with the weight.

If using other materials, such as stone or heat-resistant plating, you should follow the supplier's instructions.

Once the fireplace has been finished, you can now, fit the frame with the small door to the operating unit.

After installation in a new fireplace and/or applying new cement work, the appliance cannot be used for at least four weeks.

1.7.4 Checking the gas connection

After connection of the gas supply, check that all connections are completely gas tight using soapy water or a leak tester.

1.7.5 Positioning the ceramic log set or marble pebbles

The appliance can be supplied with:

- Ceramic log set + embers
- Marble pebbles white (small, white marble stones)
- Marble pebbles grey (small, grey marble stones)

Important:

- **Carefully place the chips of wood/embers/vermiculite granules/ log set or marble pebbles, on and around the main burner according to the directions in this chapter.**
- **Do not place any chips of wood/embers/vermiculite granules/ log set or marble pebbles against the pilot light burner.**
For that reason, the main burner has a protective pilot-light cowl. Never remove this cowl! Make sure that the pilot flame can burn at all times freely over the main burner. Only in this way is proper ignition of the main burner ensured.
- **Ignoring these directions could lead to a dangerous situation.**
- **Make sure that all burner orifices remains free at all times!**
- **The burner bed (with chips of wood/embers/vermiculite granules) and the positioning of the logs or marble pebbles must not be changed.**
- **Only use those items supplied! These been rigorously checked and the quantities adapted to the appliance.**
- **Replacement parts, including the ceramic mat are available from your dealer.**
- **Fitting may only be carried out by a qualified person.**

Remove the glass according to the instructions in chapter 4; DISMANTLING / ASSEMBLING OF THE GLASS.

1.7.5.1 Ceramic log set + chips of wood + embers + vermiculite granules

- 1 Place the ceramic mat on the burner in such a way that the holes in the mat are in line with the burner openings.
- 2 Remove the embers carefully from their packaging and spread them evenly over the burner mat and the grate around the burner.
- 3 Distribute the vermiculite granules (50 gram) evenly over the burner.

Note ! :

- Small embers and their residue should not be scattered on the burner. This can cause a blockage on the burner orifices.
- Embers and vermiculite granules must not be placed next to the pilot light burner.
- Important: make sure that all burner openings remain free !!
Burner orifices, which are not open, could lead to a dangerous situation.

4 Place the logs on the burner:

<u>Appliance</u>	<u>Natural gas-burner</u> see figure:	<u>Propane / Butane-burner</u> see figure:
Topsham Small 3 CF/LF	24	25

Keep the burner orifices unblocked !!!

5 Place the chips of wood around the burner.

Logs:

Log no ❻

Log no ❼

Log no ❽

Embers must not be placed next to the pilot light burner

Keep the burner orifices unblocked!

Figure 24: Log set Topsham Small 3 CF/LF
Position natural gas burner

Embers must not be placed next to the pilot light burner

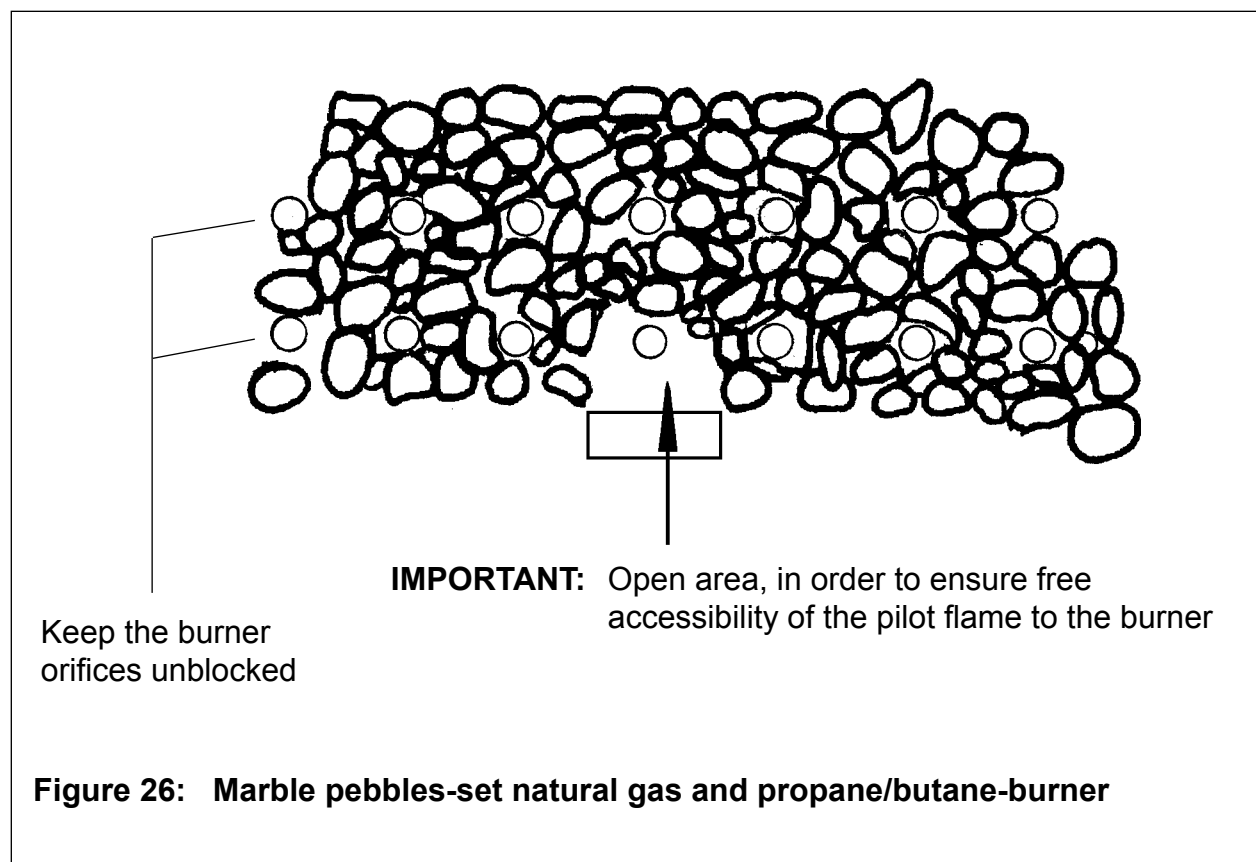

Keep the burner orifices unblocked!

Figure 25: Log set Topsham Small 3 CF/LF
Position propane/butane burner

1.7.5.2 Marble pebbles

- 1 Place the ceramic mat on the burner in such a way that the holes in the mat are in line with the burner openings.
- 2 Spread the pebbles over the whole burner bed (burner and grid around the burner). Make sure that the pilot light remains free.

Topsham Small 3 CF/LF : see figure 27

Keep the burner orifices unblocked!

Figure 27: Marble pebbles Topsham Small 3 CF/LF
Position natural gas and propane/butane burner

- Important:**
- Do not place any marble pebbles in front of the pilot light. Make sure that the pilot light can burn freely over the main burner.
 - Keep the burner orifices unblocked.

Only this way a proper ignition of the main burner is ensured.

Once the logs / marble pebbles have been positioned, replace the glass in the appliance, following the instructions in chapter 4: DISMANTLING / ASSEMBLING OF THE GLASS.

1.7.6 Mounting flue gas restriction plate

Depending on the length and shape of the concentric flue system and the chimney construction, you should, if indicated, fit a restriction plate with a certain width (B) into the ceiling of the combustion chamber.

To do this, see the set-up options as listed in figure 4 through 14.

Important:

Ensure that the correct flue gas restriction plate is mounted. Use of the correct flue gas restriction plate will provide optimum efficiency, flame effect and combustion. Mounting an incorrect flue gas restriction plate can result in damage to the gas fire.

Figure 28: Positioning restriction plate

The following restriction plates are supplied:

	Concentric flue connection appliance	
Restriction plate:	[Ø130 - 200 mm] Horizontal wall outlet	[Ø100 - 150 mm] Roof-mounted outlet
Width:	-	B = 30 mm
Width:	B = 40 mm	B = 40 mm
Width:	B = 50 mm	B = 50 mm
Width:	B = 65 mm	B = 65 mm
Width:	B = 80 mm	-

1.7.7 Checking the appliance following installation

After installation, visually check the gas flame. When the fire is ignited, the flames should be short and blue/yellow in colour. These flames should gradually increase in height and become more yellow. When all flames are yellow, the gas fire has reached the correct temperature.

THE GAS FIRE IS NOW READY FOR USE

2 MAINTENANCE

2.1 ANNUAL MAINTENANCE

It is **essential** that the appliance, the complete concentric flue system (where possible) and the outlet are cleaned and inspected **annually** by a recognised fitter/gas specialist. The safe operation of the appliance will thus remain guaranteed.

Maintenance consists of the following:

- Remove first the embers, vermiculite granules, logs set or pebbles from the main burner and carefully clean these with a soft brush.
- Clean and inspect (visually) the main burner, pilot light, combustion chamber, flue system and combustion air intake. Dust can be removed using a vacuum cleaner.
- Clean the glass on the inside of the appliance with glass spray or ceramic hob cleaner. This also applies to the black mirror side panels, if the appliance is fitted with these.
- After cleaning;
Carefully replace the embers, vermiculite granules, logs set or pebbles on and around the main burner according to the installation directions in this instruction booklet.
Do not place any embers, vermiculite granules, logs or pebbles against the pilot light burner. Make sure that the pilot flame can burn at all times freely over the main burner. Only in this way is proper ignition of the main burner ensured. Ignoring these directions could lead to a dangerous situation.
- Check the gas supply, flue system, and combustion air supply route for leaks.
- Check the correct operation of the gas regulating block, thermocouple circuit and the ignition of the main burner.
- Check the gas inlet-pressure (both when the appliance is off and when it burns at maximum) and the burner pressure.
- Check the complete concentric flue system including the outlet construction. A camera can be used to inspect the whole length of the flue gas outlet and the combustion air intake.
Also check that all connections are secure.

3 FAULTS

3.1 POSSIBLE REASONS

Possible reasons for the gas fire going out are:

- The concentric flue system is not installed according to one of the methods detailed in Paragraph 1.6.
- An incorrect “flue gas restriction plate” is fitted.
- The pilot light extinguishes if fumes are not exhausted or are insufficiently exhausted.
- The pilot light is either dirty or defective.
- Insufficient gas pressure.
- (Internal) leak of the concentric flue system.
- Thermocouple voltage is too low. This is usually caused by insufficient heating of the thermocouple by the pilot light.
- Dirty electrical contacts in the thermo-electrical system; for example, the thermocouple connection.
- Batteries in receiver or remote control are flat.

3.2 SAFETY MEASURES IN THE APPLIANCE

3.2.1 Thermo-electric pilot light shut off

The appliance is protected by means of a thermo-electric pilot light shut off in the event of a gas escape from the main burner.

3.2.2 Over pressure safety system

The appliance is fitted with a patented safety system, whereby the door will extract any over-pressure that arises in a controlled way. In this, a spring system briefly causes the door to hinge forward a few centimetres. A loud noise can occur.

A safety strip limits the maximum degree to which the door can be tilted.

If an over-pressure situation occurs, the appliance should be thoroughly checked by the installer.

4 DISMANTLING / ASSEMBLING OF THE GLASS

4.1 TOPSHAM SMALL 3 FLOATING FRAME

Dismantling of the glass:

- Topsham Small 3 Floating Frame

- Use the hook supplied (see photo) for opening the frame and the glass.

Note ! :

When loosening the frame and after it has been loosened, support it with your hand to prevent it falling forward !

- With the hook, pull the thin, metal spring strip on the top middle from the stud on the frame.

stud (middle)

- Detail of the stud (middle).

- Place paperboard on the chimney breast, under the frame. This helps prevent damage.

- Dismantle the safety strip from the frame.

- Carefully tilt the frame and the window forwards.

Note ! : Frame and window are two separate parts !

- Take hold of the frame and the glass clamped together and pull these upwards.

- Frame and glass are now removed from the appliance.

Assembling of the glass:

The assembly of the glass takes place in reverse order.

Important:

- Check whether the frame is properly positioned underneath in the 2 holes of the front.
- Check whether the frame is placed in the middle of the front.
- Check whether the safety strip is securely fastened to the top of the frame (middle).
- The glass (frame) must fit tightly all round to the edge of the combustion chamber.
- Check that the spring strip, on the top, remain in its proper place.

4.2 TOPSHAM SMALL 3 HIDDEN DOOR

Dismantling of the glass:

- Topsham Small 3 Hidden Door.

- Use the hook supplied for opening the frame (including glass).

- Use the hook to pull the frame at the top forward and hold the frame firmly.

- With the hook, pull the thin, metal spring strip on the top middle from the stud on the frame.

- Dismantle the safety strip from the frame.

Note ! :

When loosening the frame and after it has been loosened, support it with your hand to prevent it falling forward !

- Carefully tilt the frame and the glass forwards at the top.
Prevent damage by laying paperboard on the chimney breast, under the frame.
Pull the frame upwards and remove it from the appliance.

Assembling of the glass:

The assembly of the glass takes place in reverse order.

Important:

- Check whether the frame is properly positioned underneath in the 2 holes of the front.
- Check whether the frame is placed in the middle of the front.
- Check whether the safety strip is securely fastened to the top of the frame.
- The glass (frame) must fit tightly all round to the edge of the combustion chamber.
- Check that the spring strips, on the top, remain in their proper place.

5 DIAGRAM ELECTRICITY AND GAS

Double burner:

- : Perforation pattern "Centre Fire" double burner.
- + ● : Perforation pattern "Line Fire" double burner.

6 DIMENSIONS

6.1 TOPSHAM SMALL 3

6.1.1 TOPSHAM SMALL 3 - Hidden Door

6.1.2 TOPSHAM SMALL 3 - Floating Frame

6.2 TOPSHAM SMALL 3 Fitted with the options: - Convection casing - High adjustable feet

6.2.1 TOPSHAM SMALL 3 - Hidden Door

* With the high adjustable feet (option), the appliance can be installed till 350 mm above the floor.

6.2.2 TOPSHAM SMALL 3 - Floating Frame

* With the high adjustable feet (option), the appliance can be installed till 350 mm above the floor.

6.3 TOPSHAM SMALL 3 Hidden Door Plus (+)

6.3.1 TOPSHAM SMALL 3 - Hidden Door Plus (+) 7 cm Frame

* With the high adjustable feet (option), the appliance can be installed till 350 mm above the floor.

6.3.2 TOPSHAM SMALL 3 - Hidden Door Plus (+) 10 cm Frame

* With the high adjustable feet (option), the appliance can be installed till 350 mm above the floor.

6.3.3 TOPSHAM SMALL 3

Hidden Door Plus (+) 10 cm Frame & Decorative Stone

Fitted with the options: - Convection top plate
- High adjustable feet

* With the high adjustable feet (option), the appliance can be installed till 350 mm above the floor.

With this model the remote control receiver and the gas regulating block are located in the fire and can be accessed via the metal cover, under the stone. The gas fire does not have a separate operating unit !!

OPERATING UNIT

7 TECHNICAL DETAILS/REGULATIONS

National installation regulations:

- UK : • Gas safety installation and use regulations 1998 plus all relevant safety and building regulations concerning fire installation
- Document J: Combustion appliances and fuel storage systems

Model	: TOPSHAM SMALL 3 CF (Centre Fire)
Gas	: NATURAL GAS
Country	: GB; Great Britain / IE; Ireland
Product identification no	: 0063CM3684
Type of appliance under CE-norm	: C ₁₁ / C ₃₁ / C _{31S}
Category of appliance	: I _{2E+} natural gas G20
Nominal heat input (Gross calorific value)	: 9.0 kW
Nominal heat output	: 6.9 kW
Efficiency class	: 1 (85%)
NOx-class	: 5
Gas rate (max.)	: 0.85 m ³ /hr.
Supply pressure	: 20.0 mbar
Burner pressure (max.) Hot	: 15.6 mbar(*)
Burner pressure (max.) Cold	: 14.9 mbar(**)
Burner pressure (min.)	: 1.5 mbar(***)
Primary air inlet burner Rear	: 1x Ø10.0 mm
Primary air inlet burner Front	: 1x Ø10.0 mm
Gas regulator block (remote control)	: Mertik GV 60
Main burner	: Centre Fire 428 x 130 mm
Main burner injector Rear	: no 140 (= 1x Ø1.40 mm)
Main burner injector Front	: no 200 (= 1x Ø2.00 mm)
Pilot light burner	: SIT 0.145.019
Pilot light burner injector	: no 36 (SIT 0.977.091)
Gas connection	: 3/8" G / Ø12 mm
Concentric flue system connection	: Ø100 mm - Ø150 mm or Ø130 mm - Ø200 mm

Model : TOPSHAM SMALL 3 CF (Centre Fire)

Gas : NATURAL GAS

Country : GB; Great Britain / IE; Ireland

Batteries remote control

- Receiver : 4x 1.5V AA
- Hand-transmitter : 1x 9V block

Weight:

- Basis model : 70 kg
- Including all options : 82 kg
- Convection package : 9 kg

(*) : Both burners at maximum. Appliance is on temperature.

(**) : Both burners at maximum. Appliance is cold.

(***) : Both burners at minimum.

Flue gas exhaust and combustion air supply:

Roof-mounted outlet : Concentric flue system Ø100 mm - Ø150 mm. Rigid and/or flexible.

Horizontal wall outlet : Concentric flue system Ø130 mm - Ø200 mm. Rigid.

With wall outlet, depending on the flue configuration; Ø100 mm - Ø150 mm or
Ø130 mm - Ø200 mm.

Heat changing surface: Entire front of the appliance.

Model : TOPSHAM SMALL 3 LF (Line Fire)

Gas	: NATURAL GAS	: BUTANE / PROPANE
Country	: GB; Great Britain/IE; Ireland	: GB; Great Britain/IE; Ireland
Product identification no	: 0063CM3684	: 0063CM3684
Type of appliance under CE-norm	: C ₁₁ / C ₃₁ / C _{31S}	: C ₁₁ / C ₃₁ / C _{31S}
Category of appliance	: I _{2H} natural gas G20	: I _{3B/P} butane/propane G30/G31
Nominal heat input (Gross calorific value)	: 9.7 kW	: Butane (G30) : 10.1 kW Propane (G31): 8.9 kW
Nominal heat output	: 7.5 kW	: 6.9 - 7.8 kW
Efficiency class	: 1 (85%)	: 1 (85%)
NOx-class	: 5	: 5
Gas rate (max.)	: 0.92 m ³ /hr.	: Butane (G30) : 770 gr/hr. Propane (G31): 660 gr/hr.
Supply pressure	: 20.0 mbar	: Butane (G30) : 37.0 mbar Propane (G31): 37.0 mbar
Burner pressure (max.) Hot	: 11.0 mbar(*)	: 29.0 mbar(*)
Burner pressure (max.) Cold	: 10.3 mbar(**)	: 29.0 mbar(**)
Burner pressure (min.)	: 1.1 mbar(***)	: 2.0 mbar(***)
Primary air inlet burner Rear	: 1x Ø10.0 mm	: 1x Ø20.0 ^{+corner} mm + 2x Ø5.0 mm
Primary air inlet burner Front	: 1x Ø10.0 mm	: 1x Ø20.0 ^{+corner} mm + 2x Ø5.0 mm
Gas regulator block (remote control)	: Mertik GV 60	: Mertik GV 60
Main burner	: Line Fire 428x130 mm	: Line Fire 428x130 mm
Main burner injector Rear	: no 170 (= 1x Ø1.70 mm)	: no 95 (= 1x Ø0.95 mm)
Main burner injector Front	: no 210 (= 1x Ø2.10 mm)	: no 130 (= 1x Ø1.30 mm)
Pilot light burner	: SIT 0.145.019	: SIT 0.145.019
Pilot light burner injector	: no 36 (SIT 0.977.091)	: no 23 (SIT 0.977.150)
Gas connection	: 3/8" G / Ø12 mm	: 3/8" G / Ø12 mm
Concentric flue system connection	: Ø100 mm - Ø150 mm or Ø130 mm - Ø200 mm	: Ø100 mm - Ø150 mm or Ø130 mm - Ø200 mm

Model	: TOPSHAM SMALL 3 LF (Line Fire)	
Gas	: NATURAL GAS	: BUTANE / PROPANE
Country	: GB; Great Britain/IE; Ireland	: GB; Great Britain/IE; Ireland
Batteries remote control		
- Receiver	: 4x 1.5V AA	: 4x 1.5V AA
- Hand-transmitter	: 1x 9V block	: 1x 9V block
Weight:		
- Basis model	: 70 kg	: 70 kg
- Including all options	: 82 kg	: 82 kg
- Convection package	: 9 kg	: 9 kg

(*) : Both burners at maximum. Appliance is on temperature.

(**) : Both burners at maximum. Appliance is cold.

(***) : Both burners at minimum.

Flue gas exhaust and combustion air supply:

Roof-mounted outlet : Concentric flue system Ø100 mm - Ø150 mm. Rigid and/or flexible.

Horizontal wall outlet : Concentric flue system Ø130 mm - Ø200 mm. Rigid.

With wall outlet, depending on the flue configuration; Ø100 mm - Ø150 mm or
Ø130 mm - Ø200 mm.

Heat changing surface: Entire front of the appliance.

8 REPLACEMENT PARTS LIST

When requesting service or ordering replacement parts, please quote the model type and serial number. All parts listed in this manual may be ordered from a Bellfires dealer.

No	Article no	Description
1	335948	Main burner "Centre Fire" 428 x 130 mm <u>Natural gas G20</u> G20: 1x Ø10.0 mm front + 1x Ø10.0 mm rear
2	335950	Burner mat L = 428 mm "Centre Fire"
3	334975	Main burner injector <u>Natural gas</u> ; Front: no 200 (1x Ø2.00 mm)
4	334878	Main burner injector <u>Natural gas</u> ; Rear: no 140 (1x Ø1.40 mm)
5	335949	Main burner "Line Fire" 428 x 130 mm <u>Natural gas G20 / Butane/Propane G30/G31</u> G20: 1x Ø10.0 mm front + 1x Ø10.0 mm rear G30/G31: 1x Ø20.0 ^{+corner} mm + 2x Ø5.0 mm front and 1x Ø20.0 ^{+corner} mm + 2x Ø5.0 mm rear
6	335952	Burner mat L = 428 mm "Line Fire"
7	334876	Main burner injector <u>Natural gas</u> ; Front: no 210 (1x Ø2.10 mm)
8	335123	Main burner injector <u>Natural gas</u> ; Rear: no 170 (1x Ø1.70 mm)
9	301928	Main burner injector <u>Butane/Propane</u> ; Front: no 130 (1x Ø1.30 mm)
10	335120	Main burner injector <u>Butane/Propane</u> ; Rear: no 95 (1x Ø0.95 mm)
11	333597	Gas regulator block; GV 60 (M10 Thermocouple connection)
12	302122	3/8" male x Ø12 Compression fitting
13	302084	Nut Ø8 mm for burner supply GV 60 for "front burner"
14	302089	Olive Ø8 mm for burner supply GV 60 for "front burner"
15	333607	Gas valve "rear burner"
16	333608	Adapter 3/8"bsp x 3/8"+ O-ring
17	333610	Nut Ø8 mm for gas valve "rear burner"
18	333611	Olive Ø8 mm for gas valve "rear burner"
19	302086	Cut-off nipple Ø4 mm GV 60
20	333601	Cable (sw): Receiver - Thermocouple interrupter, L = 500 mm
21	333602	Cable (tc): Receiver - Thermocouple interrupter, L = 500 mm
22	333598	Hand-held transmitter: Display screen: Temperature and two programmes
23	333599	Cover battery compartment hand-held transmitter - with imprint: Operating double burner
24	333600	Receiver GV 60 - EU
25	302068	8 Wire connecting cable Gas regulator block - Receiver, L = 500 mm
26	302421	Piezo ignition cable, 2x ▯ 2.8 x 0.8 mm, L = 1500 mm
27	321926	Thermocouple M10 - 1500 mm
28	333604	Thermocouple interrupter M10

No	Article no	Description
29	310908	Pilot light set outer casing, Double flame
30	310909	Packing pilot light set outer casing
31	310910	Pilot light injector; <u>Natural gas</u> ; no 36
32	310912	Pilot light injector; <u>Butane/Propane</u> ; no 23
33	310907	Piezo electrode for pilot light, 2.8 x 0.5 mm
34	302062	Nut piezo electrode
35	319842	Nut thermocouple
36	332552	Pilot light olive; Ø4 mm, steel
37	332553	Pilot light nut; Ø4 mm, steel
38	322552	Pilot light pipe; Ø4 mm, L = 1500 mm, Flexible, Stainless steel
39	325750	Burner pipe; Ø8 mm, L = 1500 mm, Flexible, Stainless steel - 10 kW+, "front burner"
40	325750	Burner pipe; Ø8 mm, L = 1500 mm, Flexible, Stainless steel - 10 kW+, "rear burner"
41	326055	Nut; Ø8 mm, compression elbow main burner
42	326054	Olive; Ø8 mm, compression elbow main burner
43	331231	Glass Topsham Small 3 Hidden Door (524 x 524 x 4 mm)
44	331230	Glass Topsham Small 3 Floating Frame (516 x 530 x 4 mm)
45	301669	Tube ceramic glue
46	301593	Black fibre glass tape 15 x 3 mm, adhesive
47	319664	Black fibre glass tape 30 x 2 mm, adhesive
48	311006	Black fibre glass tape 20 x 2 mm, adhesive
49	301617	Black fibre glass cord Ø10 mm

9 DISPOSING OF PACKAGING AND APPLIANCE

The appliance comes in recyclable packaging.

This can include:

- Cardboard
- Wood
- Plastic
- Paper

Such materials must be disposed of responsibly, in line with local regulations.

Batteries should be disposed of as chemical waste. Batteries must be disposed of responsibly, in line with local regulations.

The authorities or fitter can provide you with information on responsible disposal of obsolete appliances.
